PROFESSIONAL SUMMARY

Senior UX Architect with 11 years of experience designing enterprise SaaS platforms, government civic systems, and consumer products. Founding designer of Javelina, a configuration-driven multi-tenant health insurance SaaS platform serving Fortune 500 clients including Cigna — built on a three-tier hierarchical theming engine that deploys new client brands in under 24 hours. Deep expertise in design systems, information architecture, and bilingual (RTL) design. Since 2025, independently shipping AI-powered products using agentic workflows — applying AI as a design and build tool, not as a product category. Works at the intersection of design architecture, product thinking, and engineering.

EXPERIENCE

Senior UX Architect · Mphasis

May 2015 – Present | Pune, India

Javelina — Enterprise Health Insurance SaaS Platform 2021 – Present

- Architected and led UX for Javelina, a configuration-driven multi-tenant SaaS platform for the US enterprise health insurance market; built and led a team of four designers across the full product lifecycle.
- Designed a three-tier hierarchical theming system (Insurer → Employer → Member) enabling full white-label brand customisation without code changes; clients include Cigna, Keenan, Aptia, and Bywater.
- Built a 120+ component design system powering web and mobile experiences across multiple enterprise tenants with consistent interaction patterns, design tokens, and documentation.
- Redesigned the Open Enrollment flow from 9 steps to 5 through decision-flow restructuring — significantly reducing drop-off at the most critical point in the user journey.
- Achieved new client theme deployment in under 24 hours; feature velocity of 2 days design, 3 days development — a direct result of the theming architecture and component system.
- Designed white-label iOS and Android mobile apps rebrandable per client in 1–2 days, extending the platform's multi-tenant model to native mobile surfaces.

Dubai Municipality — Government Civic Platform 2020 – 2021

- Led UX for a large-scale bilingual civic services platform serving millions of Dubai residents; worked onsite in the UAE presenting and approving deliverables directly with senior government stakeholders.
- Delivered full English and Arabic design with RTL layout support across web and mobile — designing for a population spanning 180+ nationalities with zero onboarding tolerance.
- Designed information architecture and service flows across a broad portfolio of digital government services including permits, payments, land services, and food safety.

Jet Airways — Consumer Multi-Platform 2015 – 2019

- Designed end-to-end digital experiences for one of India's largest airlines across web, iOS, Android, and Apple Watch.
- Shipped iOS and Android apps and an Apple Watch companion app — all live in production until the airline's closure in 2019.
- Developed a responsive component library supporting consistent multi-device coverage across the airline's digital product suite.

Founder & Product Designer · Blinkwiser

2025 – Present | Pune, India

- Designed and shipped Carousel Builder — a LinkedIn carousel PDF generator powered by a two-agent AI pipeline (StrategistAgent → TemplateAgent); live in production with active users on a freemium model.
- Designed and shipped Video Course Builder — a seven-stage AI-powered pipeline that transforms a topic into a fully scripted, visually directed course; live in free beta with teacher, student, and admin roles.
- Led product design, UX architecture, and agent workflow design entirely solo for both products — AI is a design and production tool in the process, not the product itself.

UX Designer · IBN AI QYM

Mar 2014 – Mar 2015 | Doha, Qatar

- Designed and delivered UI for web platforms in a client-facing agency environment; presented visual designs to clients and managed approval workflows.

UI/UX Designer · ITAD Learning

Jan 2012 – Dec 2013 | Pune, India

- Designed mockups for web applications; created brand and marketing assets; collaborated with product and engineering teams.

Web & Graphic Designer · Wahab Studio

Aug 2007 – Dec 2011 | Pune, India

- Delivered web and print design across multiple client engagements; created mockups, visual designs, and magazine layouts.

KEY PROJECTS & CLIENTS

Javelina	Cigna, Keenan, Aptia, Bywater — founding designer on a multi-tenant enterprise health insurance SaaS platform for the US market, serving Fortune 500 clients.
Dubai Municipality	Bilingual civic services platform with full English and Arabic RTL support; onsite UAE engagement with senior government stakeholders.
Jet Airways	Web, iOS, Android, and Apple Watch applications — all in production until 2019.
Nusuk	POC landing page approved by the Ministry of Hajj and Umrah, Saudi Arabia.
Blinkwiser	Two independently shipped AI-powered SaaS products with active users — designed solo from concept to production.

SKILLS

Design	Multi-tenant Design Systems · Information Architecture · Interaction Design · Usability Testing · Journey Mapping · Design Tokens · Hierarchical Theming · White-Label Configuration · Bilingual / RTL Design · Accessibility (WCAG) · Agentic UX Patterns
Tools	Figma · FigJam · Framer Motion · Protopie · Storybook · Zeplin · Maze · Miro
Technical	React / Next.js · TypeScript · HTML / CSS · CSS Variables / Design Tokens · LangChain / LangGraph · REST APIs · Appwrite · Vercel
Leadership	Team of 4 designers · Cross-functional stakeholder management · Enterprise health insurance (US) · Government civic platforms · Consumer mobile (iOS / Android / Watch)

EDUCATION

Bachelor of Business Administration (BBA)

Mahatma Gandhi University

2011 - 2013
